

## Amucor shielded box

### Amucor shielded box

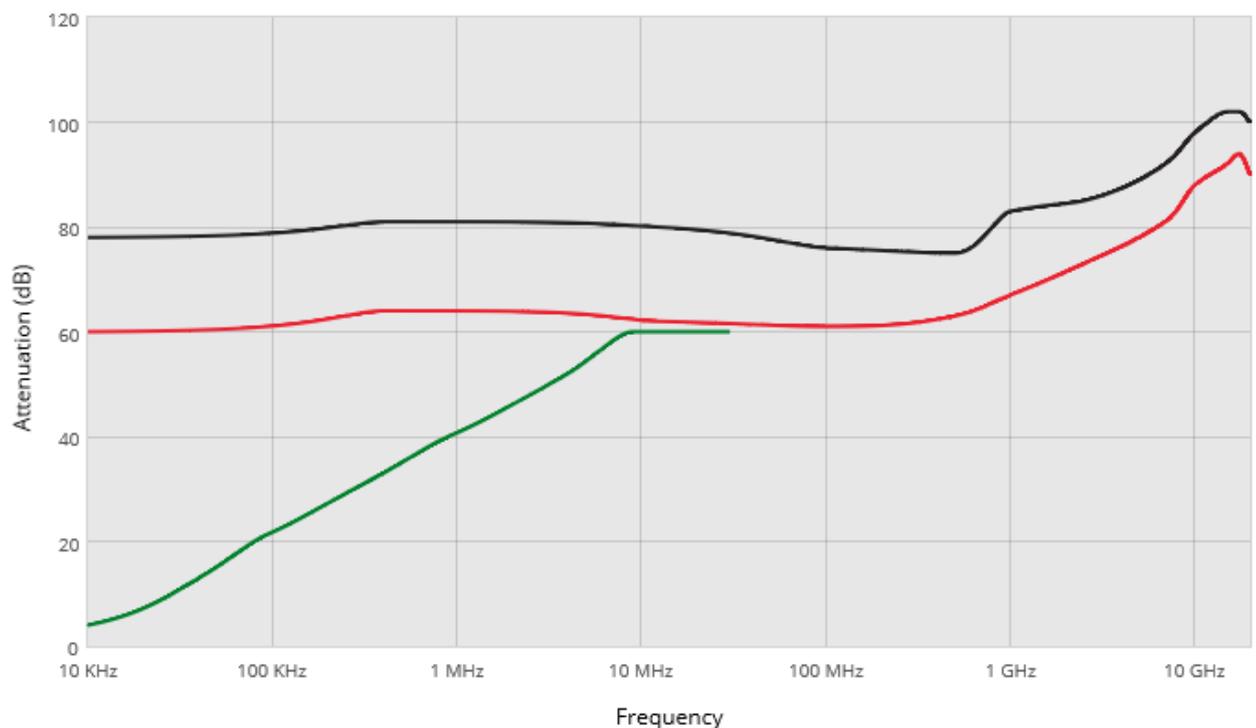

Box with amucor lined inside. Easy transport and prototyping

The shielded box covered with amucor can easily be made for small runs, the box is easy to transport and ideal for prototyping. Optionally custom made for your application. The box can be made with MDF (for bigger sizes) or in acrylic material (for smaller boxes). Due to the material the box is very light weight and portable. The construction of the box is made with a separate cover, which fits into the box.

The shielding performance can be improved with extra tape or a conductive seal at the corners and/or with an emi gasket on the cover. Optionally we can also make the bigger size boxes with our filter modules

For more information about amucor see or Amucor faraday cage.
