

Zippershield conductive textile

Zippershield conductive textile 4781

The zippershield is made to shield bundles of cables or for cables with big connectors through a sleeve to create excellent EMI shielding.

The zippershield is made to shield bundles of cables or for cables with big connectors through a sleeve to create excellent EMI shielding. The product is made of conductive textile, is easy to unzip and is flexible in use.

The standard version is made for a bundle of cables around 30 mm. The zipper is of the heavy-duty range and the shield overlap should be at least 50% to prevent any leakage.

We also have systems based on foils where cables are just invisible. We can make any length and also accessories so that branches can be made of the cable.

Partnumber	Diameter (mm)	Length (mm)
4781	Please specify the desired diameter in mm.	Please specify the desired length in mm.
